## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Toncray (Fig. 1; page 1, lines 38-67, 84-98).

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toncray taken together with McGinley et al.

Toncray (Fig. 1; page 1, lines 38-67, 84-98) as applied above substantially discloses applicant's invention as recited by instant claims 2-8, except for the specific disc construction as recited thereby.

McGinley et al (Figs. 8-10; col. 6, line 64 through col. 7, line 5) disclose a liquid agitating disc system driven about a common horizontal axis, wherein a plurality of discs are provided that include a plurality of liquid receiving recesses (81,82) that are spaced along the periphery of the respective discs. The recesses cooperate with adjacent disc structures (41) that

Art Unit: 1724

are formed in segments (42) that over lie adjacent recesses (81,82) to create the water receiving recesses. It would have been obvious to an artisan at the time of the invention, to substitute the disc structure of McGinley et al for that of Toncray, since such would allow for more discs and thus more water receiving recesses per unit length of the drive axis, thereby insuring that adequate water was consistently introduced into the air stream moving through the device.

5. Claims 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toncray taken together with any one of Chiu et al, Jane et al or Byassee et al.

Toncray (Fig. 1; page 1, lines 38-67, 84-98) as applied above substantially discloses applicant's invention as recited by instant claims 10-12, except for the water supply tank provided on the lower base member to supply a controlled amount of water to the liquid containing compartment and also to seal the lower base member along with the upper cover member.

Any one of Chiu et al (Fig. 7), Jane et al (Figs. 10 and 11) or Byassee et al (Fig. 4) disclose conventional water supply tanks for use on a room air humidifier, wherein the tank is provided on the lower base member to supply a controlled amount of water to the liquid containing compartment and also to seal the lower base member along with the upper cover member. It would have been obvious to an artisan at the time of the invention, to modify the housing construction of Toncray to include a water supply tank in the manner as taught by any one of the alternative secondary references, since such would allow for longer use of the humidifying device without the need to constantly refill the liquid containing compartment by shutting down the device and refilling the compartment by hand.

*Allowable Subject Matter*

6. Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

*Conclusion*

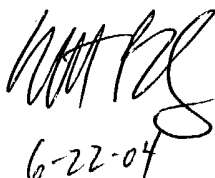

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
